

Aquaresistcrete™

Mix with the Best

Do it “Watertight” the first time

Aquaresistcrete™

Mix with the Best

Aquaresistcrete™ is an exclusive waterproofing concrete that is suitable for basements, swimming pools, lift pits and many other structures that require effective waterproofing. Normal concrete, as strong as it may be, cannot stop water from seeping through fine cracks and over time, deterioration.

Aquaresistcrete™ contains specially formulated admixture that causes a catalytic reaction in the presence of moisture and the by-products of cement hydration, to generate a non-soluble crystalline formation throughout the pores and capillary tracts of the concrete, making it Water Tight.

7 Key Advantages:

1. Keeps water out or in as required.
2. Cost effective solution.
3. Waterproofing and Chemical resistance properties remain intact even if the surface is damaged.
4. Effective against hydrostatic pressure.
5. Enhanced durability and long term performance.
6. Reduced risk of reinforcement corrosion.
7. Non Toxic.

Applications:

- Basement and Retaining Walls.
- Swimming pools.
- Water retaining structures.
- Sewage and water treatment plants.
- Tunnels and Subways.
- Bridges.
- Foundations.
