guardian

Highdensecrete™

Mix with the Best

Highdensecrete™ is heavyweight concrete with a density greater than 2600 kg/m³ and can be used to protect & shield places with greater risk of radiation. It constitutes the basic physical properties of compressive strength and high density. It can be made from natural heavyweight aggregates and can also be produced using iron or lead as a replacement for a portion of the aggregate.

3 key advantages:

1. Excellent Radiation Shielding.
2. Negative Buoyancy.
3. Sound & Vibration Attenuation.

Applications:

- Radiation shielding in nuclear power plants and radiation therapy units inside hospitals.
- Heavyweight concrete is used for ballast in offshore locations such as pipelines.
- Bridge Construction.
