MegacreteTM

Breaking the height barrier

Megacrete™ the ultimate solution. The construction industry in the country is poised for a boom in the vertical direction. Existing metros and fast developing cities are generally reeling under the scarcity of land and the overwhelming surge in population growth. Existing infrastructure is under tremendous pressure.

Hence, construction of high rise buildings, mega-urban infrastructure projects like metro rail networks, long span bridges / flyovers, etc is inevitable. Prohibitive land costs and the need for effective utilization of space at its maximum, beckon designers to conjure structural members with least possible dimensions. Here **Megacrete™** from RMC Readymix (India) comes to the rescue.

7 key advantages:

1. Jumbo Strength and Dense Concrete.
2. Supports high-rise constructions.
3. Increased floor space availability.
4. Reduction in the total steel requirement.
5. High early strength allowing early stripping times and speedy construction.
6. Improved durability.
7. Increased elastic modulus and lower creep.

Applications:

- RCC columns and beams in high rise buildings; columns, beams and girders for mega-urban infrastructure projects.
- Precast structural elements.
- Marine structures.
