Perviouscrete™

Mix with the Best

Perviouscrete™ is a special category of modified concrete that permits rain and storm water runoff to percolate through it rather than flood surrounding areas or storm water drains. Its unique filter action removes pollutants from rain run-offs and allows the sun's heat to evaporate volatiles, leaving behind the remaining solids to be consumed by microbial action. This permeated water replenishes ground water table and aquifers; hence, can also be termed as "Rain Water Harvesting Concrete"

5 key advantages:

1. Recharges ground water.
2. Reduces storm water runoff.
3. Solves water logging on concrete surfaces.
4. Freedom from mosquito & other insects breeding.
5. Leads to earning points for LEEDS Certification.

Applications:

- Car Parking.
- Play Grounds.
- Courtyards.
- Nurseries & Gardens.
- Surrounding swimming pools.
