

# Xpresscrete™

Mix with the Best

Express Strength!  
Express Savings!!

Xpresscrete™ is a range of early-strength concrete which speeds up construction by allowing either subsequent activities post concreting such as pre-stressing to be taken up earlier, or quick release of formwork or putting the structure to early use. This can save time, energy and money by ensuring conformance to production deadlines with confidence, reducing the requirement for external heating and reducing production time and increasing productivity.

Xpresscrete™ helps to meet the specific engineering demands of a construction project and is an ideal proposition for any development where speed and timely completion are the essence of the project.

### 5 key advantages:

1. Increased productivity through quicker removal of formwork.
2. Accelerates critical sections of a construction process.
3. Structure can be put to intended use earlier.
4. Reduced labour hours and equipment rentals.
5. Cost effective solution.

### Applications:

- Precast facilities: Beams, panels and specific elements.
- Pavements and trafficked roads.
- Concrete casting using Aluform systems.
- Climbing and Gliding formwork systems.
- Pre-stressed concrete structures.
- Temporary water control structures.
- Tunnels and Subways.
