

Construction of commercial building slab through FRCcrete®

Volume supplied	66.5 cum
Area of application	slab
Solution	FRCcrete®
Location	Trivandrum
Duration	2 months

FRCcrete® execution on slab

Project Description

The project was in a commercial building having 6 floors.

Challenges

Due to the wind velocity and temperature being very high, the chances of cracks also increased. Normal concrete here would be prone to cracks and the same was seen in the first two floor where concreting was done. Hence the RMC CSG team recommended using FRCcrete®.

Solution

FRCcrete® is a high specialty concrete produced by RMC Readymix (India). Once the concreting was done, the client visited the site to find no cracks in slab. The client was very much satisfied with the performance of FRCcrete®.
