

Construction of retaining wall through RMC Special Easycrete®

Volume supplied	26 cum
Area of application	Retaining wall
Solution	Easycrete®
Location	Trivandrum
Duration	2 months

Easycrete® execution site

Project Description

During the rainy season, soil near the house in Trivandrum used to collapse. To prevent this, a retaining wall had to be constructed near the house.

Challenges

Total length of retaining wall was 12 m and height is 2m. Since the reinforcement was very congested, vibration could not be done easily.

Solution

RMC Readymix (India) team visited the site and understood the problem and recommended a solution of Easycrete®. Easycrete® is a self compacting concrete which is characterized by high resistance to segregation and can be cast with minimal noise.

The client was very much happy with the performance of Easycrete®
