

Industrial Floor Screeding through PORTACRETE®

Volume supplied	62 Bags
Area of application	Industrial Floor Screeding
Solution	Portacrete® with PP Fibers
Location	Mahindra & Mahindra, Nashik
Duration	1 day

Project Description

The project site was at Mahindra & Mahindra where industrial flooring was to be done. Fork lift movement over the floor of approximate 500kg per wheel load was the purpose. The volume of concrete required was less than 1cum.

Challenges

No direct vehicle access at casting location. Volume requirement was also less.

Housekeeping was the major concern as the plant is in running condition.

Thickness was very low (25mm).

Solution

RMC team visited the site & recommended Portacrete® with PP fibers for M30 grade. PP fibre helps to mitigate cracking & since the quantity was less (less than 1cum) Portacrete® was recommended

Transportation of Portacrete® bags

Filling up of Portacrete® bags
